Introduction: The Importance of ESG in the Construction Sector

The construction industry is an essential factor for economic development on a global level but contributes significantly to the degradation of the environment, social injustices, and lack of good governance. While construction activities contribute almost 38% of CO₂ emissions to the world's output, the industry faces considerable pressure regarding ESG principles. ESG is not just a compliance factor; rather, it's a strategic facilitator for sustainability, resilience, and stakeholder trust.

Why ESG Matters in Construction

Environmental Impact:

- High consumption of resources, including materials, water, and energy.
- High level of waste/emission during construction and demolition.

New opportunities: sustainable materials, energy-efficient buildings, and circular economy practices.

Social Responsibility:

- Health and safety of workers are paramount.
- Community engagement is important to minimize disruptions and maximize local benefits.
- Diversity, equity, and inclusion enhance creativity and productivity in the workforce.

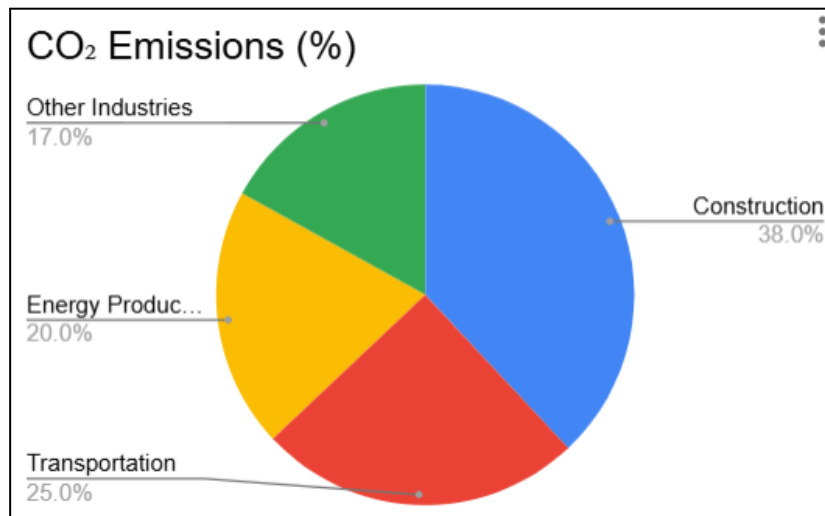

Governance Excellence:

- Ethical practices and transparency will make the stakeholders believe in an organisation.
- Strong governance complies with regulation and mitigates risks.
- Legislation such as the EU's Green Deal and France's AGECL Law demands the licensure of sustainability.

Key Drivers for ESG in Construction Regulatory Pressure:

- Market Demand: Both investors and clients show a growing affinity for ESG-compliant projects.
- Cost Efficiency: ESG initiatives like waste reduction and energy efficiency reduce operational costs.
- Reputation: A potent ESG strategy enhances brand value and facilitates building a talent base and invested community.

CO₂ emissions with respect to Industry

(Source: UN Environment Programme)

Benefits of ESG

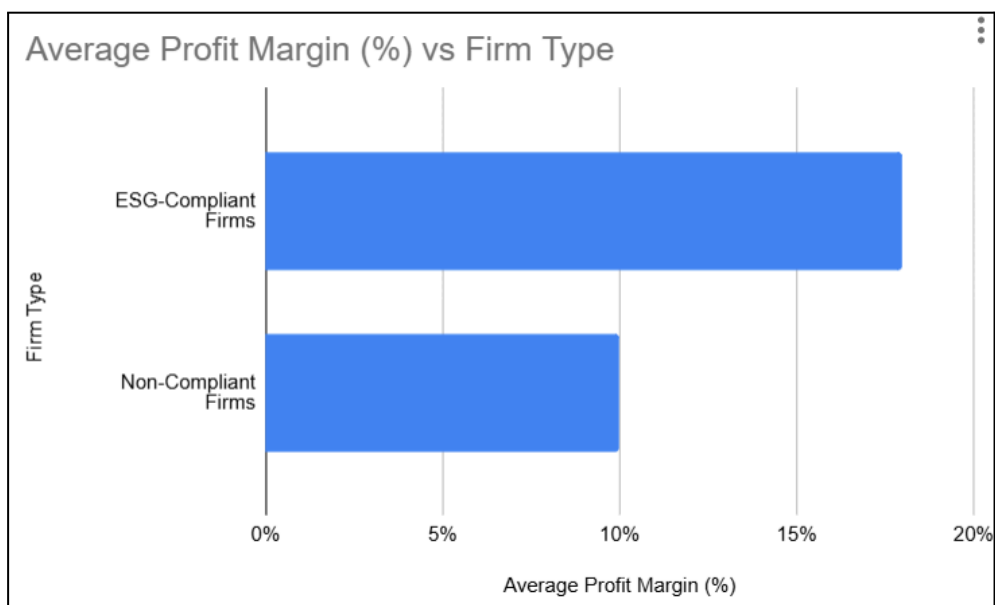

Dimension	Key Benefits
Environmental	Reduced emissions, improved resource efficiency, and alignment with global climate goals.
Social	Improved worker safety, enhanced community relationships, and equitable labour practices.
Governance	Increased transparency, risk mitigation, and improved stakeholder confidence.

ESG Compliance Trends in Construction

(Source: McKinsey & Company)

ESG Impacts on Financial Performance

(Source: Harvard Business Review)

Executive Summary

Our consultancy firm is committed to elevating BESIX's performance management system by embedding the principles of sustainability and ESG into the core operations thereof. By adopting a systematic approach-three bespoke solutions of training programs, KPIs, and the Resource Marketplace-we will be in a position to create a solid framework that aligns both individual and organizational performance with the sustainability objectives of BESIX.

1. *Training Programmes:* These initiatives equip employees and senior leaders with the ESG knowledge and role-specific skills needed to integrate sustainability into day-to-day decision-making. The programmes include modules on ESG fundamentals, sustainable project management, ethical procurement, and career development tied to sustainability, ensuring organisation-wide competency and engagement.
2. *KPIs:* Custom-built KPIs, suiting the operations and ESG objectives of BESIX, are the backbone of performance management. These measures encompass environmental, social, and governance dimensions, thus enabling quantitative progress and accountability and rewarding employees who support BESIX's mission to sustain the environment.
3. *Resource Marketplace:* Through the Material Passport system of BESIX, the marketplace enables the reuse and exchange of raw materials, hence embracing a circular economy. It integrates performance management, enabling actionable KPIs on material reuse, regulatory compliance, and innovative contributions that encourage employees to take an active part in sustainability.

These solutions together will not only enhance the operational efficiency and ESG compliance of BESIX but also bring in cultural transformation by embedding sustainability into the performance evaluation, incentivization, and organizational strategy of the company. It positions BESIX as a leader in sustainable construction while fostering long-term value for stakeholders.

Recommendations

1. ESG Fundamentals for Senior Leaders (Duration: 6 Weeks)

Objective:

This programme aims to equip senior leaders with foundational ESG knowledge crucial for strategic decision-making. As senior executives may have limited ESG experience, this programme provides essential insights, helping them understand and apply ESG principles in the construction sector. It empowers leaders to trickle down this effect within the organisation.

Content:

- **Module 1: Introduction to ESG in the Construction Industry** – A basic outlay can be provided to the learners on topics such as:
 1. Definition of ESG, and a clear explanation of the three principles.
 2. How ESG impacts the construction industry and how it correlates to issues such as climate change, resources depletion and others.
 3. An understanding of the regulatory associations and certifications such as ISO 14001, LEED and BREEAM.
 4. Addressing the scope of ESG at Besix, considering both internal and external factors.
 5. A comprehensive understanding of ESG reporting and disclosure such as GRI and SASB.
- **Module 2: Case Studies and Best Practices** – Examination of successful ESG practices at companies like Skanska and VINCI.
 - 1) Innovative construction technologies, and the use of sustainable materials, energy-efficient design, and digital technologies to reduce the environmental impact of construction projects.
 - 2) Strategies for promoting social equity, diversity, and inclusion within the workforce and communities where BESIX operates.
 - 3) Addressing ethical sourcing, supplier diversity, and responsible procurement practices, thus promoting sustainable supply chain practices.
 - 4) Strategies to reduce greenhouse gas emissions and build resilience for combating climate change.
 - 5) Promoting circular economy processes, thus promoting waste reduction, recycling, and reuse to reduce environmental impact.
- **Module 3: Embedding ESG into Strategic Decision-Making** – Practical workshops on implementing ESG KPIs for decision-making. Leaders are familiarised with learnings about:
 - 1) ESG risk assessment through which BESIX can identify risks and opportunities.
 - 2) Utilising existing KPIs and developing similar ones to assess progress towards the ESG goals of the company and other stakeholders.
 - 3) Scenario Analysis to assess the potential impact of future climate change scenarios on the operations of BESIX.
 - 4) Integration of ESG into finance, accounting and decisions such as capital budget and investment appraisal.

- **Module 4: Mentoring for ESG Knowledge Transfer** – Training on guiding junior staff in ESG concepts. This can be divided into the following:
 - 1) Communicating the importance of ESG to employees at all levels.
 - 2) Providing guidance and support to junior staff on ESG issues.
 - 3) Inspiring employees to embrace sustainability as a core value.
 - 4) Creating a work environment that promotes innovation, collaboration, and a commitment to sustainability.

Budget Estimate:

- **Training Material Development:** Approx. €15,000 for customised content, industry-specific ESG topics, and case studies.
- **Facilitator Fees:** €20,000-€30,000 for external ESG consultants and trainers for a 3-day workshop.
- **Venue and Logistics:** €5,000 for an in-person venue; reduced for virtual sessions.
- **Online Platform Costs:** €2,000-€5,000 for licensing and support if conducted virtually.
- **Total Estimated Cost:** €42,000-€55,000, depending on delivery format.

Long-Term Benefits:

Senior leaders equipped with ESG knowledge can make informed, sustainability-aligned decisions. This programme positions them as advocates for sustainability, fostering an atmosphere and setting a right example for junior employees, thus greeting a good start for BESIX's pursuits towards sustainability.

2. Role-Specific ESG Skills Development Programme (Duration: 8 Weeks)

Objective:

This programme provides employees across various functions with specialised ESG skills directly relevant to their job roles. For example, project managers will gain skills in sustainable project management, while construction managers learn about eco-friendly materials. This ensures that ESG principles are embedded into day-to-day responsibilities across all levels and jobs, creating an organisation-wide commitment to sustainability.

Content:

- **Module 1: ESG Basics for All Roles** – Introduction to core ESG concepts tailored for different roles, through which employees are explained clearly about BESIX's ESG commitments and principles, and the link between ESG and the construction industry.
- **Module 2: Sustainable Project Management (Project Managers)** – Covers key concepts such as energy efficiency, waste reduction, and carbon footprint tracking. Emphasis can be given to:
 - 1) Sustainable Project Planning, and setting ESG objectives for projects.
 - 2) Sustainable design and construction, by which sustainable materials can be chosen and waste/energy efficiency can be incorporated.

- 3) Life Cycle Assessment, and assessing the environmental impact of projects such as construction, operation and demolition.
- 4) Monitoring and Reporting with the help of KPIs.
- **Module 3: Ethical Procurement and Supply Chain (Financial Managers)** – Training on sustainable and ethical sourcing and supplier management/assessment. Emphasis can also be given to supply chain transparency.
- **Module 4: Green Construction Practices (Construction Managers)** – Techniques for eco-friendly materials, waste reduction/recycling, and emissions control.
- **Module 5: Measuring and Reporting ESG Impact** – This is important for measuring and reporting ESG performance to demonstrate accountability and transparency. Key learnings can further include:
 - 1) ESG metrics and KPIs
 - 2) Data collection and analysis, through which accurate and reliable data can be collected on environmental and social performance.
 - 3) ESG reporting, for more credibility and to attain accreditations from frameworks such as GRI and SASB.
 - 4) Communication ESG findings to both internal and external stakeholders.

Budget Estimate:

- **Curriculum Development:** €20,000 for role-specific training content.
- **Online Module Creation and Licensing:** €10,000-€15,000 for e-learning modules via BESIX Academy.
- **In-Person Workshops (optional):** €5,000 per session for venue, materials, and facilitators.
- **Assessment and Feedback Tools:** €3,000 for tools to monitor and adjust training.
- **Total Estimated Cost:** €35,000-€50,000, depending on delivery format.

Long-Term Benefits:

This programme builds ESG competency across roles, helping BESIX achieve cost savings through efficient resource use, and enhancing employee retention by creating meaningful, ESG-aligned career paths.

3. Career Path Development with ESG Focus (Duration: 6 Weeks)

Objective:

This programme aims to support employees' career development while aligning their growth with BESIX's ESG objectives. It includes ESG-linked KPIs in performance evaluations, encouraging employees to advance by contributing to sustainability goals. Through workshops, mentorship, and progress reviews, employees identify and develop ESG skills relevant to their career progression.

Content:

- **Module 1: ESG-Linked Career Development** – Overview of how ESG integration can support career growth at BESIX:

- 1) How can they be a career catalyst, and help differentiate a person in the job market in accordance with the current trends.
 - 2) How to become an ESG Leader and drive sustainable business practices and shape the future of the construction industry.
 - 3) Finding a link between ESG and talent acquisition, retention, and development strategies.
 - 4) Exploration of emerging trends in sustainability and their impact on future jobs.
- **Module 2: ESG Skill Identification and Development** – Identifying role-specific ESG skills and fostering on-the-job learning by:
 - 1) Self assessment, and trying to understand the strengths and weaknesses of each and every employee with regards to ESG.
 - 2) Analysis of skill gaps, in order to achieve career goals.
 - 3) Exploring various types of learning such as on-the-job training, mentoring and formal training.
 - 4) Creation of Personal Development Plans, to acquire and enhance ESG skills.
 - **Module 3: ESG Mentorship and Career Guidance** – Mentorship resources to support ESG-focused career progression through:
 - 1) Mentorship matching and through accurate pairing with seniors who are well-versed in ESG.
 - 2) Mentorship goals through which skills development, career advancing and networking can take place.
 - 3) Scheduling regular meetings to discuss progress, challenges and future plans.
 - 4) Providing career coaching to help employees identify opportunities, overcome obstacles and achieve goals.
 - **Module 4: Personal ESG Contribution and Goal Setting** – Setting individual ESG goals using the SMART framework, after which progress can be tracked, best practices can be shared and achievements can be celebrated.

Budget Estimate:

- **Workshop and Material Costs:** €10,000 for ESG-specific career workshops.
- **Mentorship Programme Implementation:** €5,000 for pairing logistics and materials.
- **ESG KPI Integration:** €5,000-€10,000 for HR consultation and ongoing system updates.
- **Quarterly Progress Review:** €2,000 per quarter for tracking and assessments.
- **Total Estimated Cost:** €22,000-€30,000, with recurring costs for assessments.

Long-Term Benefits:

By tying career growth to ESG goals, BESIX builds a culture of sustainability at all levels. Employees feel more engaged and motivated, creating a competitive advantage in attracting talent who prioritise career development within an ESG-aligned framework.

2) KPIs- To progress and lead in ESG

Objective:

After a solid foundation has been built, sustainability-focused KPIs must be used to align operations with ESG goals by reducing environmental impact, enhancing efficiency, promoting well-being, and fostering ethical governance. These metrics drive innovation, embed a culture of sustainability, and will position BESIX as a leader in building a sustainable future.

1) Environmental KPIs:

KPI	Description	Employee Evaluation	Benefits
<i>Waste Diversion Rate</i>	Percentage of waste diverted from landfills through recycling, reuse, and material passport systems.	Construction Teams: Evaluated on material segregation and reuse practices. Sustainability Officers: Assessed on leadership and effective use of passport data.	Promotes circular economy principles, reduces landfill waste, and supports BESIX's sustainability goals.
<i>Green Building Certification Rate</i>	Percentage of projects achieving certifications (e.g., LEED, BREEAM).	Design Teams: Evaluated on sustainable design principles. Project Managers: Assessed on certification adherence and handling complex project requirements.	Drives sustainable construction, enhances BESIX's industry reputation, and reduces environmental impacts.
<i>Carbon Emissions Management</i>	Carbon emissions per project, including reductions through designs and materials like green concrete.	Project Managers: Assessed on implementing emissions-reduction strategies. Sustainability Officers: Evaluated on guiding teams to achieve reduction targets.	Positions BESIX as a leader in carbon neutrality, contributing to global climate goals and aligning with the "CO ₂ Performance Ladder."
<i>Sustainable Site Development</i>	Percentage of projects on brownfields, focusing on biodiversity and community benefits.	Project Managers: Evaluated on managing brownfield development. Construction Teams: Scored on material reuse and environmental best practices.	Supports urban regeneration, reduces sprawl, and demonstrates BESIX's commitment to biodiversity and community well-being.

<i>Renewable Energy Usage</i>	Percentage of energy from renewable sources on-site.	Project Managers: Assessed on integrating renewable solutions. Energy Technicians: Evaluated on optimising renewable systems and energy-saving measures.	Highlights BESIX's commitment to energy efficiency, reduces dependence on non-renewable energy, and aligns with environmental ESG goals.
-------------------------------	--	---	--

2) Social KPIs:

KPI	Description	Employee evaluation	Benefits
<i>Employee engagement in ESG Social discussions</i>	Ensure employee participation in discussion about ESG Social Dimension to help shape BESIX's sustainability roadmap.	Participation rate in ESG discussion sessions and the number of actionable recommendations.	This KPI could increase employee ownership of BESIX's ESG goals and encourage employee input on BESIX's corporate ESG strategy.
<i>Employee wellbeing</i>	Develop an index based on surveys covering mental health, physical safety, and job satisfaction to track employee mental, physical, and emotional well-being.	Combine survey responses on physical, mental, and emotional well-being to create a composite index and use the survey findings to implement targeted improvements.	This KPI will provide actionable insights to improve employee well-being.
<i>ESG certification for employees</i>	Certify employees on BESIX's training programs on ESG principles	Percentage of employees certified annually.	This KPI will promote understanding of BESIX's ESG strategy

3) Governance KPIs

KPI	Description	Benchmark
<i>ESG Training for Decision-Makers</i>	Ensures decision-makers are equipped to integrate ESG principles into their operations.	Skanska mandates ESG-specific training for all project managers.
<i>Supply Chain Transparency</i>	Upholds ethical sourcing, labour standards, and environmental compliance in BESIX's supply chain, critical in the construction industry.	Companies like L'Oréal audit 90%+ of their supply chains annually for ESG compliance.
<i>Stakeholder Engagement</i>	Strengthens trust and collaboration with communities, investors, and employees while addressing ESG concerns.	Firms like IKEA engage stakeholders quarterly on ESG topics.
<i>Incident Reporting Transparency</i>	Encourages transparency and accountability while enabling swift corrective action.	Bouygues publicly reports major incidents as part of its sustainability disclosures.
<i>ESG Governance Structure</i>	Percentage of senior executives with ESG performance targets included in their annual appraisals.	Skanska ties executive compensation to sustainability performance.
<i>Innovation in ESG Practices</i>	Positions BESIX as a leader in sustainable innovation within the construction industry.	Skanska incorporates low-carbon materials and modular solutions into its projects to achieve net-zero targets.

Bonus Tip- Resource Marketplace

The link to Performance Management:

The Resource Marketplace fits perfectly with the performance management of BESIX through goal alignment between employees and corporate sustainability objectives. It creates reportable KPIs around material reuse rates, compliance with AGECE regulations, and other key activities of teams contributing to a circular economy. Employees would then

be appraised upon the effectiveness of material management or even creative ways of making use of the marketplace with Material Passport, instilling accountability and motivating involvement. Moreover, through the marketplace, participation is incentivized by rewards linked to sustainability achievements, meaning that BESIX's workforce contributes to pushing its ESG strategy forward.

Abstract

BESIX already has a strong system in place with its Material Passport, which tracks material values and their potential for reuse. Building on that, the idea here is to extend this expertise and create a Resource Marketplace where companies can sell or exchange unused raw materials. This positions BESIX not just as a leader in material tracking but as a pioneer in fostering a new way of building the circular economy in France.

Existing Marketplaces

The following is a brief on existing marketplaces, point out any inaccuracies in the same:

There are currently similar marketplaces that exist in other parts of the world. In Europe there is Restado, which currently operates in Germany, Austria and Switzerland, and Rotor deconstruction, which operates in Belgium. These companies work by facilitating or directly acquiring reusable materials, restoring them and then putting them up for sale to other buyers that may need them. In North America, PlanetReuse does the same, by buying used materials, restoring them if needed, holding them as inventory and then selling them to interested buyers as they come.

The success of these firms solidifies the merit of the idea and further emphasises the potential of such a marketplace in France. By leveraging the existing material passport system, BESIX is in a unique place to pioneer such an endeavour in the French Market.

The following action plan details a realistic approach on how BESIX can capitalise on this opportunity. The proposed plan is also a more attractive concept to industry players as it provides a more streamlined and accessible interface and cuts out the middleman and any related fees it may bring.

Regulatory Compliance

The pivotal law concerning this operation is the Anti-Waste law for a Circular Economy (AGEC) which is a law designed to promote sustainable practices in reusing resources to minimise waste and landfill usage. Other laws also exist that are important to consider when developing the marketplace and perfecting the material passport framework to both avoid fines and penalties and also secure incentives and government subsidiaries.

The two important first steps in this regard is to firstly register as “authorised waste handlers” to ensure all aspects and processes of the material passport framework and marketplace intricacies are completely legal and to avoid potential fines. Secondly, BESIX can attempt to claim certain subsidiaries, reduction in VAT rates, tax credits or other bonuses awarded by the French government for incorporating circular economy practices. At scale, the marketplace could make enough of a difference in the circular economy to allow BESIX to avail even larger bonuses than the standard rates.

Perhaps the most important regulatory aspect to keep in mind is the material passport system itself and the entire process. The most important laws regarding the same include:

- Re-used material must meet French and European quality standards (French NF standards, CE marking requirements, etc).
- Materials must pass health and safety standards which means they cannot contain hazardous substances such as asbestos or lead that are especially more common in older buildings.
- Depending on the particulars of the project, the concerned materials must be qualified to withstand the structural pressure and load-bearing demands of the construction.

Action Plan

Step 1 - System Creation

- Develop the material passport system to serve as the foundational framework for the marketplace such that materials can be systematically assigned economic values based on expected life, condition, quality, etc. There also needs to be an up-to-date index with all current material monetary values to be used for calculating the current value of any given material all things considered. Future estimates of values are also ideal to have, advanced

versions of the framework would ideally have machine learning systems to automatically update existing and future values.

- Define transactional models, example - monetary compensation, barter system, etc. The underlying rules of each model should also be clearly stated, for example a barter system of different types of materials will be done based on the economic value of the materials as per the BESIX material framework. For simplified accounting, the standard should be straight monetary transactions with the barter system as a secondary, optional model.
- Ensure all elements of the framework will serve reliably in the long term to ensure the integrity of the marketplace is preserved.

Step 2 - Soft Launch

- Select a handpicked set of companies who would be ideal members of the marketplace, it is paramount that these companies can be contacted for further talks on the same. Furthermore a diverse set of firms should be selected for the most comprehensive feedback.
- Reach out to the selected firms to pitch them on the idea. It is crucial that complete transparency is maintained and all calculations on the framework are shared to secure trust; however the foundational proprietary information should not be inadvertently exposed. Use the success of existing marketplaces such as the aforementioned ones (Restado, Rotor Deconstruction, etc) as social proof and the developed material passport framework as system proof to close the firm.
- Gather feedback and decide whether to move forward to step 3 or go back to step 1 to further optimise.

Step 3 - Hard Launch

- Gradually invite more players in the industry in a methodical fashion to sustainably grow the marketplace.
- Hire digital designers to create an online platform with suitable UI/UX capabilities to streamline and automate market transactions.
- Establish a vigilant governing body for the marketplace that oversees all activity, upholds the integrity of the marketplace and makes adjustments as needed to processes as it expands.

Estimated Costs

Assuming that the development of the marketplace and the material passport framework will be done in-house. The primary external costs would be largely in hiring developers to create the digital infrastructure needed to sustain the operations of the project. Estimated costs of hiring digital developers is between 70,000 to 150,000 euros. Apart from this, 15 to 20% of the initial development cost should be set aside as an annual maintenance budget to keep things up-to-date and in smooth working condition.

Other potential costs depend on particular actions BESIX may elect to undertake for the project, for example legal consultation, industry events for growing the marketplace, developing the core team, etc. A more finalised budget can be drawn once the action plan has been suitably advanced.

Conclusion

Our consultancy has aligned BESIX's performance management system with its ESG ambitions through the implementation of specially designed solutions, such as training programs, KPIs, and the Resource Marketplace. These solutions weave sustainability into the DNA of BESIX's operations and create a culture of accountability, innovation, and continuous improvement.

The training programs ensure that people and leadership are properly equipped with the skills and knowledge required to embed ESG principles into their roles, thus making a commitment toward sustainability at all organizational levels. The KPIs provide measurable benchmarks that correlate individual performance with BESIX's ESG objectives, thus allowing unmistakable tracking of progress and encouraging worthwhile contributions. Last but not least, the Resource Marketplace utilises BESIX's Material Passport system to enable the circular economy by providing a place where employees and teams can take impactful sustainability practices in hand while enhancing operational efficiency.

This comprehensive approach will also further cement BESIX as a leader in sustainability within the construction industry while ensuring that its performance management system supports long-term organisational and environmental resilience. Our solution paves the way for BESIX to achieve its ESG objectives while fostering stakeholder confidence and driving measurable success.

Appendix

1) ESG Training Module

Timeline

Module	Duration	Key Activities
Module 1: ESG Fundamentals for Senior Leaders	6 weeks	- Introduction to ESG principles and their relevance to the construction sector. - Overview of ESG frameworks (ISO 14001, LEED, etc.) - Case studies of ESG practices (Skanska, VINCI). - ESG Reporting and Disclosures (GRI, SASB).
Module 2: Role-Specific ESG Skills Development	8 weeks	- ESG Basics for All Roles - Sustainable Project Management for Project Managers - Ethical Procurement and Supply Chain for Financial Managers - Green Construction Practices for Construction Managers - Measuring and Reporting ESG Impact
Module 3: Career Path Development with ESG Focus	6 weeks	- ESG-linked Career Development - ESG Skill Identification and Development - ESG Mentorship and Career Guidance - Personal ESG Contribution and Goal Setting using SMART framework

2) Resource Market Place:

Timeline

Step	Action	Timeline
Step 1: System Creation	Develop Material Passport, define transactional models, and ensure long-term framework reliability.	6 months
Step 2: Soft Launch	Select ideal companies for initial feedback, ensuring transparency.	3-4 months
Step 3: Hard Launch	Expand the marketplace with a digital platform, and establish a governing body.	6 months onward

Estimated Costs

Item	Estimated Cost
Material Development	€15,000
Facilitator Fees	€20,000 - €30,000
Platform Development	€70,000 - €150,000
Annual Maintenance	15% - 20% of initial cost
Total Estimated Cost	€42,000 - €55,000 (Initial Phase)
